
Supplementary Fig. 1. Comparison of PRS levels between the control and stroke groups. (A) Existing participants (184 cases and 7,606 controls). (B) Extended cohort (383 cases and 7,715 controls) includes the previously excluded participants (199 cases and 109 controls). The statistical analysis was performed using an independent t-test. Data were presented as mean±SEM (****p<.0001).
