

EXERCISE SCIENCE 운동과학

Vol. 31, No. 1, February 2022

- The Role of Exercise Science in Human Health Digital Technology Era
- The Effect and Application of Beta-Hydroxy-Beta-Methyl Butyrate (HMB) Supplementation in Exercise Science
- Does Taekwondo Poomsae Training Impact on Body Composition, Physical Fitness, and Blood Composition in Children and Adolescents? A Systematic Review
- Effects of Resistance Training and/or Protein Supplementation on Usual Gait Speed in Postmenopausal Women: A Systematic Review and Meta-Analysis
- Physical Activity Level and Exercise Barriers According to the Transtheoretical Model in Breast Cancer Patients
- Effects of Bilateral and Unilateral Eccentric Exercise on Muscle Damage and Muscular Physiological Indices in Healthy Men
- The Effect of 8 Weeks of Online High-Intensity Interval Training on Body Composition, Blood Lipids, Cytokines, and Quality of Life in Overweight Men during the COVID-19 Era
- Changes in Heart Rate, Muscle Temperature, Blood Lactate Concentration, Blood Pressure, and Fatigue Perception Following Jogging and Running: An Observational Study
- Comparison of Gait variables and Relative Risk of Falls According to Walking Speed During Flat and Obstacles Walking of Fallers and Non-Fallers in Korean Elderly Women
- The Effects of Self-Myofascial Release Before Weight Training on Functional Movement and Delayed-Onset Muscle Soreness
- Analysis of G-test Results According to Fatigue, Physical Fitness and Body Composition of Air Force Cadets Using Smart Watches
- The AGTR2 (RS11091046) Gene Polymorphism is Associated with Cycling Performance in Korean Cyclists
- Grip Strength Measurement in the Right Hand Better Predicts Mortality Regardless of Dominant Hand
- Effect of 4 Weeks of Moderate-Intensity Endurance Exercise and Lithium Administration on Blood Glucose Level in STZ-Induced Type 1 Diabetes Mellitus Mice
- Optimal Frequency Intensity of Physical Activity to Reduce the Risk of Hypertension in the Korean Population
- A Pilot Feasibility Study of a Combined Supervised- and Home-Based Exercise to Improve Cancer-Related Symptoms in 1-3 Colorectal Cancer Patients
